NEW FRENCH BEAN

BEAN—HAWKESBURY WONDER

A recent introduction to the group of dwarf French beans produced by Plant Breeders of the New South Wales Department of Agriculture. Being "Halo" Blight resisting makes it very popular but beside that it is a very heavy cropper and pods are long, straight, practically stringless, and suitable for Autumn and Spring sowing. Packet 6d. (post paid 8d.). For bulk prices see page 4.

PAPER RATIONING

To save paper we have this year dispensed with our usual Autumn catalogue and we ask customers to use previous issues for descriptions of varieties. Prices in previous lists are cancelled, and we will maintain prices herein quoted as long as possible.

Annual Catalogue. We hope to publish a descriptive list of all varieties in April to replace catalogues previously published twice yearly.

Conditions of sale and terms of business are as outlined in previous catalogues.

Rumseys Plant List

ORNAMENTAL AND FLOWERING TREES AND SHRUBS. ROSES, HEDGE PLANTS, FRUIT TREES, VINES AND STRAWBERRIES.

This list contains the most popular varieties, but we will always obtain others for customers requiring them, if procurable.

STRAWBERRY PLANTS

For many years it has been customary in N.S.W. to make main plantings of strawberries in Autumn (April and May). However, during the last three or four years many of the most successful growers have obtained much better results from spring planting. July being favoured in coastal districts and August in the cooler mountain areas.

Due to the "Leaf Crinkle" virus disease which appears to be present in practically all N.S.W. coastal districts it is almost impossible to obtain supplies of plants absolutely free of the trouble but by systematic rogueing throughout the growing season we have been able to considerably improve on strains offered during recent years. Many varieties showing pronounced susceptibility to infection have been temporarily abandoned and we will not offer them for sale until "clean" strains can be produced.

The following varieties are what we offer this year.

PRICES AND VARIETIES

1/- dozen; 50 for 3/6; 6/- 100. Special quotation for 1000 lots. For country orders, add 4d. dozen; 1/- for 50; 1/6 100 extra for freight and packing.

GILBERT'S SEEDLING.—The result of a chance cross between Fendalcino and Rhodes Special, this new strawberry has the large sized fruit of Rhodes Special as well as much of the rich deep color of Fendalcino. Being a new seedling it can be expected to be free from leaf crinkle virus diseases for some years. Produces enormous crops of excellently flavoured berries and is early maturing. A "perfect flowering" kind, it is not necessary to grow another sort adjacent to ensure pollination. In our opinion Gilbert's Seedling would be very suitable to grow with Fendalcino, which bears a pistolate flower only, to ensure satisfactory pollination of the latter. Price 1/6 per doz.; 5/6 per 50; 10/- per 100. Special quotes for 1000 lots. Freight and Packing Extra, as above.

FENDALCINO.—Popular market berry, large size and splendid flavor. It is not, however, self fertile, and must be grown with another variety in at least every third row. Under this method it is very prolific. Although not absolutely free from "Leaf Crinkle", we maintain that we have the healthiest stock of this variety that there is available.

CRESWELL'S SEEDLING.—Popular market berry. We have located a stock of this excellent variety reasonably free from "crinkle". Very heavy producing strain. Self fertile.

PHENOMENAL.—This popular Queensland variety has shown considerable resistance to "Leaf Crinkle". It is one of the best commercial strains for coastal planting from Sydney north. Self pollinated.

PLANTING.

Deciduous trees, that is those that drop their leaves during Winter, should be planted while dormant, which is from May to August inclusive. June and July are generally best, but in some very cold districts later planting is advisable.

Planting times for citrus trees (oranges, lemons, grapefruit, etc.), are somewhat different. In mild climates Autumn (March and April) are good months, especially when good rains are experienced early in Autumn. In cooler districts where there is danger of frost injury to young trees, Spring planting is recommended (August to September).

VARIETIES.

There are hundreds of varieties of trees but in most districts it is advisable to limit the range to well known kinds which have proven their suitability to the district where they are to be planted. We can supply most of the popular kinds and if desired we will select varieties which in our opinion will suit our customers' requirements.
